

EMC Documentum ApplicationXtender SharePoint Integration

Complement Microsoft SharePoint with advanced document management capabilities

The Big Picture

- Enable access to documents stored in ApplicationXtender from standard SharePoint interfaces
- Combine ApplicationXtender and SharePoint content
- Move content from SharePoint to ApplicationXtender for workflow or archival purposes
- Move content from ApplicationXtender to SharePoint to facilitate collaboration

Many organizations use Microsoft SharePoint to enable effective collaboration and ensure document accessibility. However, SharePoint is not necessarily the ideal solution for storing all document types.

For organizations with high document volumes and fixed document types, EMC[®] Documentum[®] ApplicationXtender[®] provides capabilities not available in a traditional SharePoint environment. SharePoint integration for ApplicationXtender combines the ease of use and complete document access provided by SharePoint with the strong document management and workflow capabilities in ApplicationXtender.

Universal content access

ApplicationXtender SharePoint integration gives SharePoint applications complete visibility into the documents stored within ApplicationXtender repositories. Web Parts controls provide a direct portal into ApplicationXtender content, including fully customizable queries and complete document lists based on query results.

With complete access to all ApplicationXtender documents, SharePoint users can leverage and quickly access all business-critical documents, no matter where they are stored. SharePoint applications can aggregate content from both SharePoint and ApplicationXtender, while documents stored within ApplicationXtender continue to take advantage of its underlying document management capabilities.

When documents within ApplicationXtender must be viewed or accessed, SharePoint users can leverage ApplicationXtender viewing tools to see the content directly in the SharePoint browser-based user interface. In addition to downloading these documents for local use, SharePoint users can view these documents within the browser, view thumbnails of multiple page documents, or zoom into specific areas of a single page.

Complete document management

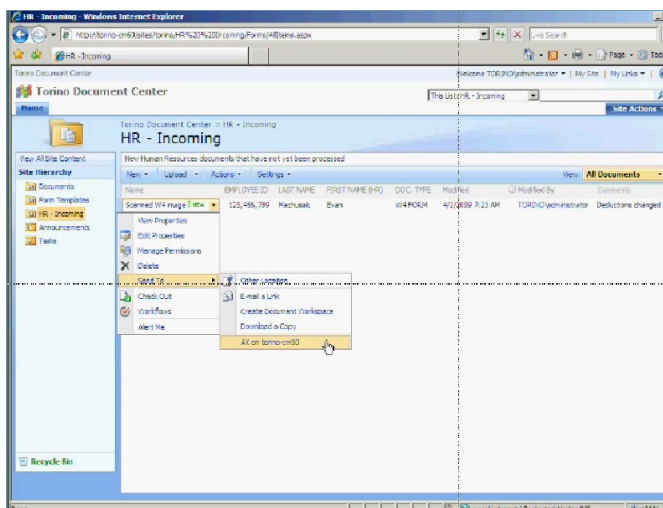

While SharePoint provides ubiquitous access for users throughout an organization, its architecture is tailored for collaboration, not large-scale document management. ApplicationXtender SharePoint integration enables you to leverage ApplicationXtender strengths in document management without sacrificing easy access from within SharePoint.

ApplicationXtender capabilities include:

- Security
- Support for high document volumes
- Workflow
- Retention management
- Integration with EMC Centera®

SharePoint content archiving

In addition to providing tools to view content within SharePoint, ApplicationXtender SharePoint integration also enables you to easily move content from SharePoint to ApplicationXtender repositories to take advantage of critical document management capabilities. The integration gives you maximum flexibility for archiving your SharePoint content. ApplicationXtender can move content on demand or on a pre-scheduled basis. This process can preserve all SharePoint metadata while providing continued access to content within SharePoint.

SharePoint Send-to feature for ApplicationXtender
